

Burpsuite Basics

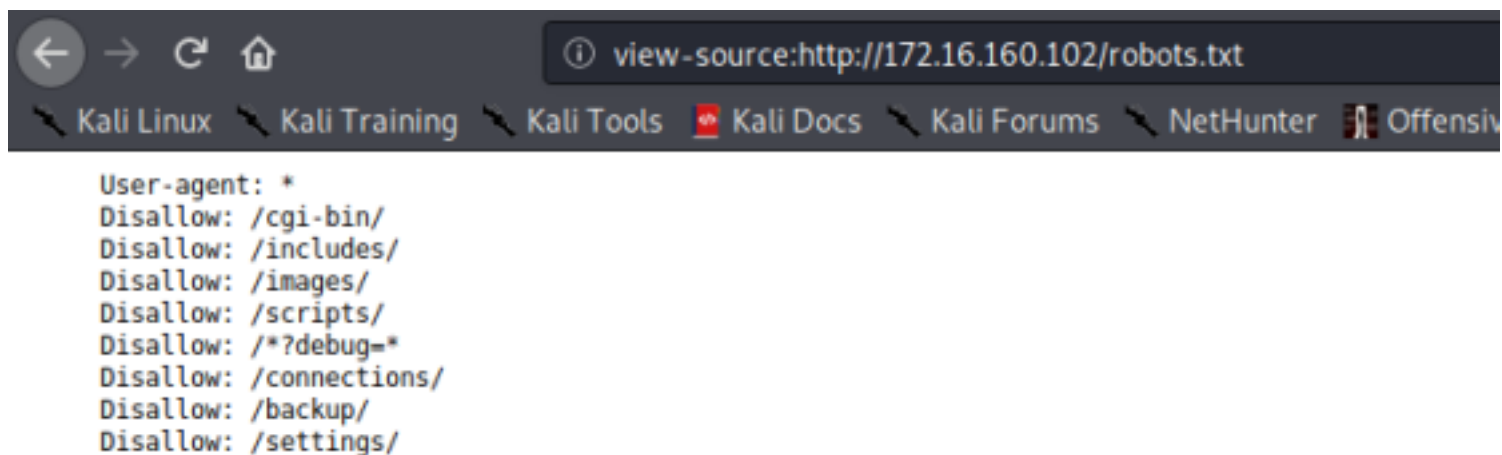

When we access the IP address from the browser, we get this landing page.

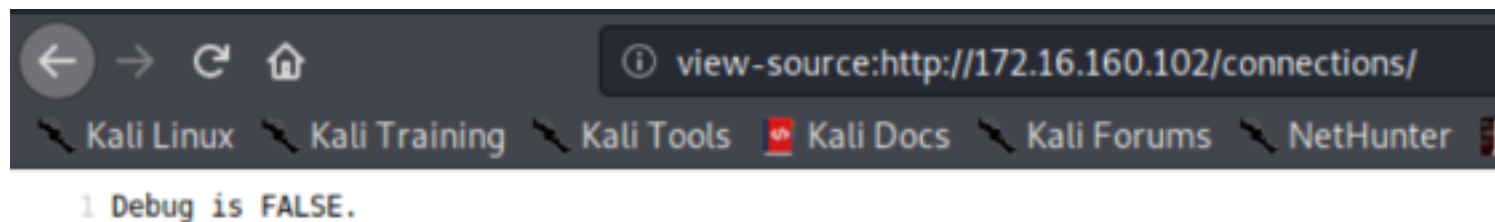

It doesn't seem like much, but we can inspect the source code to find some sensitive information.

```
1 <html>
2 <head></head>
3 <center><h1>Site under construction!</h1></center>
4 <hr /><br />
5 <!-- TODO: -->
6 <!-- add a 302 redirect to the new page -->
7 <!-- remember to remove robots.txt when done -->
8 A new site will be announced soon..
9 </html>
10
```

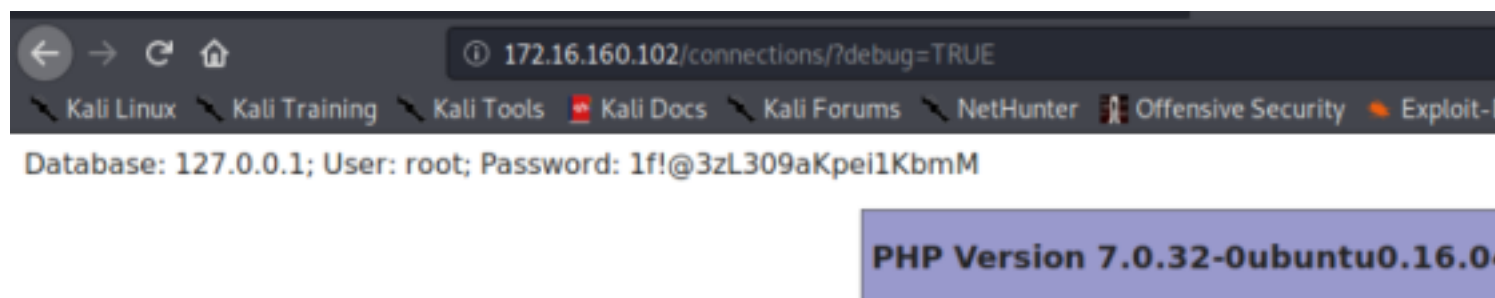

We know that the robots.txt file is there. Let's check it out.

We have a list of possible directories. While checking, we found that the connections directory has a webpage on it. The debug parameter also caught our eye.

Sure enough, in connections we can see a message Debug is false. Let's add the url parameter debug. We didn't find anything when set to false, so we tried setting it to true.

We found sensitive information.
