

BurpSuite

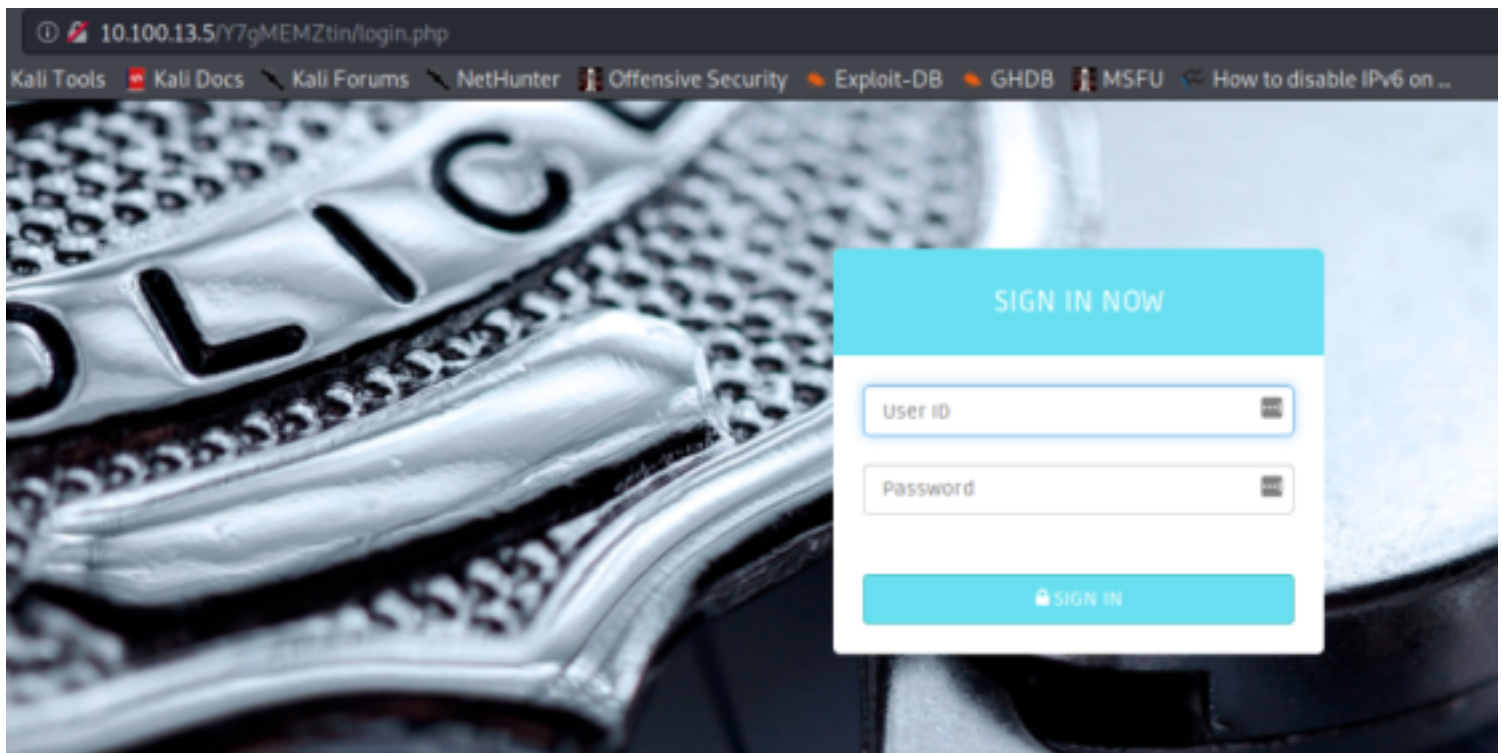

We accessed the ip address to find this landing page

We checked the robots.txt file and found a hidden directory name

We accessed that directory to find a login page.

At the bottom of the source code of the login page, we got a hint to bypass the login

```

386
387
388
389
390 <!--
391 *****
392     ALERT: Remove this in production!!
393 *****
394
395 DEBUGGIN MODE
396 To avoid the authentication page, send in the query string DEBUG=policeDebug
397
398 e.g. login.php?DEBUG=policeDebug
399 -->
100

```

We used this to get into the CMS
